Zoology

The Royal Museum for Central Africa is the custodian of 10 million biological specimens that include: 6 million insects 1 million fish 300,000 spiders 200,000 amphibians 150,000 birds 135,000 mammals 41,000 reptiles

Invertebrates - Insects

The collection contains 6 million specimens. The majority of the insect orders found in Africa are represented. Main place of origin: DR Congo, Burundi and Rwanda. For some groups, the entire Afrotropical region is covered. Taxon lists are available for most groups. The collection includes several historical and reference collections (including extensive holdings of types) such as: specimens obtained through research conducted in the national parks of Virunga, Garamba and Upemba in the DR Congo the Carabidae collection of P. Basilewsky the ants from the Yangambi collection of Raignier-van Boven the termite collection of A. Bouillon.

Coleoptera (348 records)

The Coleoptera collection contains around 52000 species, including 14700 holotypes

Vertebrates

Amphibians and Reptiles (20 records)

Our collections contain 41,000 reptiles and 200,000 amphibians (mostly specimens preserved in alcohol, but also skeletons and alizarin preparations). Main place of origin: DR Congo, Rwanda, Burundi, Cameroon, Ivory Coast, Togo. The collection contains 182 taxa with primary types, 52 with secondary types, and 31 with an unspecified type. The authors of the majority of the type material are G.-F. de Witte and R. Laurent.

Birds (1 record)

Our collection contains 150,000 bird specimens, including flat-skins, specimens preserved in alcohol, mounted specimens and skeletons. Approximately 250 species and sub-species of bird are represented by type specimens.

Prionops alberti - RMCA_Vert_A.24144

Fishes (2 records)

With 1 million specimens, our collection is the largest collection of African fresh and brackish water fish in the world. It contains the type material of one third of all described African species. We also have the largest collection of type specimens from Lakes Kivu and Tanganyika, which has continuously grown since the museum's creation. In addition, a major, more recent collection of some hundred species from Lake Malawi, the majority of which are undescribed, is available.

Haplochromis sp - RMCA VER A152
Haplochromis paucidens - RMCA VER 12906

Mammals (144 records)

The collections contain more than 135,000 mammals, represented by skins, specimens preserved in alcohol, skulls and skeletons. Rodents (88,000) and bats (18,500) form the bulk of the collection, followed by primates (10,500). Many primate skulls have been digitised using CT scanning techniques. Contact Emmanuel Gilissen for further information.
